Unit 4 Waves, Fields and Nuclear Energy

PA04

Section A

Thursday 15 June 2006 9.00 am to 10.30 am

For this paper you must have:

- an objective test answer sheet
- a black ball-point pen
- a calculator
- a question paper/answer book for Section B (enclosed)

Time allowed: The total time for Section A and Section B of this paper is 1 hour 30 minutes

Instructions

- Use a black ball-point pen. Do **not** use pencil.
- Answer **all** questions in this section.
- For each question there are four responses. When you have selected the response which you think is the most appropriate answer to a question, mark this response on your answer sheet.
- Mark all responses as instructed on your answer sheet. If you wish to change your answer to a question, follow the instructions on your answer sheet.
- Do all rough work in this book **not** on the answer sheet.

Information

- The maximum mark for this section is 30.
- All questions in Section A carry equal marks. No deductions will be made for incorrect answers.
- A *Data Sheet* is provided on pages 3 and 4. You may wish to detach this perforated sheet at the start of the examination.
- The question paper/answer book for Section B is enclosed within this question paper.

Data Sheet

- A perforated *Data Sheet* is provided as pages 3 and 4 of this question paper.
- This sheet may be useful for answering some of the questions in the examination.
- You may wish to detach this sheet before you begin work.

SECTION A

In this section each item consists of a question or an incomplete statement followed by four suggested answers or completions. You are to select the most appropriate answer in each case.

- 1 A mass M on a spring oscillates along a vertical line with the same period T as an object O in uniform circular motion in a vertical plane. When M is at its highest point, O is at its lowest point.

What is the least time interval between successive instants when the acceleration of M is exactly in the opposite direction to the acceleration of O ?

- A $\frac{T}{4}$
- B $\frac{T}{2}$
- C $\frac{3T}{4}$
- D T
- 2 A particle of mass m oscillates with amplitude A at frequency f . What is the maximum kinetic energy of the particle?
- A $\frac{1}{2} \pi^2 m f^2 A^2$
- B $\pi^2 m f^2 A^2$
- C $2 \pi^2 m f^2 A^2$
- D $4 \pi^2 m f^2 A^2$

- 3 The sound quality of a portable radio is improved by adjusting the orientation of the aerial. Which statement is a correct explanation of this improvement?
- A The radio waves from the transmitter are polarised.
 - B The radio waves from the transmitter are unpolarised.
 - C The radio waves become polarised as a result of adjusting the aerial.
 - D The radio waves become unpolarised as a result of adjusting the aerial.
- 4 A microwave transmitter is used to direct microwaves of wavelength 30 mm along a line XY. A metal plate is positioned at right angles to XY with its mid-point on the line, as shown.

When a detector is moved gradually along XY, its reading alternates between maxima and minima. Which one of the following statements is **not** correct?

- A The distance between two minima could be 15 mm.
- B The distance between two maxima could be 30 mm.
- C The distance between a minimum and a maximum could be 30 mm.
- D The distance between a minimum and a maximum could be 37.5 mm.

5

In a double slit system used to produce interference fringes, the separation of the slits is s and the width of each slit is x . L is a source of monochromatic light. Which one of the following changes would **decrease** the separation of the fringes seen on the screen?

- A moving the screen closer to the double slits
- B decreasing the width, x , of each slit, but keeping s constant
- C decreasing the separation, s , of the slits
- D exchanging L for a monochromatic source of longer wavelength

6

The diagram above shows the first four diffraction orders each side of the zero order when a beam of monochromatic light is incident normally on a diffraction grating of slit separation d . All the angles of diffraction are small. Which one of the patterns, **A** to **D**, drawn on the same scale, is obtained when the grating is exchanged for one with a slit separation $\frac{d}{2}$?

A**B****C****D**

- 7 A $1000\ \mu\text{F}$ capacitor, initially uncharged, is charged by a steady current of $50\ \mu\text{A}$. How long will it take for the potential difference across the capacitor to reach $2.5\ \text{V}$?
- A 20 s
B 50 s
C 100 s
D 400 s
- 8 In experiments to pass a very high current through a gas, a bank of capacitors of total capacitance $50\ \mu\text{F}$ is charged to $30\ \text{kV}$. If the bank of capacitors could be discharged completely in $5.0\ \text{ms}$ what would be the mean power delivered?
- A 22 kW
B 110 kW
C 4.5 MW
D 9.0 MW
- 9 For a particle moving in a circle with uniform speed, which **one** of the following statements is correct?
- A The displacement of the particle is in the direction of the force.
B The force on the particle is in the same direction as the direction of motion of the particle.
C The momentum of the particle is constant.
D The kinetic energy of the particle is constant.
- 10 Which one of the following graphs correctly shows the relationship between the gravitational force, F , between two masses and their separation r .

- 11 When at the surface of the Earth, a satellite has weight W and gravitational potential energy $-U$. It is projected into a circular orbit whose radius is equal to twice the radius of the Earth. Which line, **A** to **D**, in the table shows correctly what happens to the weight of the satellite and to its gravitational potential energy?

	weight	gravitational potential energy
A	becomes $\frac{W}{2}$	increases by $\frac{U}{2}$
B	becomes $\frac{W}{4}$	increases by $\frac{U}{2}$
C	remains W	increases by U
D	becomes $\frac{W}{4}$	increases by U

- 12 Two protons are 1.0×10^{-14} m apart. Approximately how many times is the electrostatic force between them greater than the gravitational force between them?

A 10^{23}

B 10^{30}

C 10^{36}

D 10^{42}

- 13 Particles of mass m carrying a charge Q travel in a circular path of radius r in a magnetic field of flux density B with a speed v . How many of the following quantities, if changed one at a time, would change the radius of the path?

- m
- Q
- B
- v

A one

B two

C three

D four

- 14 In the reaction shown, a proton and a deuterium nucleus, ${}^2_1\text{H}$, fuse together to form a helium nucleus, ${}^3_2\text{He}$

What is the value of Q, the energy released in this reaction?

$$\text{mass of a proton} = 1.00728 \text{ u}$$

$$\text{mass of a } {}^2_1\text{H nucleus} = 2.01355 \text{ u}$$

$$\text{mass of a } {}^3_2\text{He nucleus} = 3.01493 \text{ u}$$

- A** 5.0 MeV
B 5.5 MeV
C 6.0 MeV
D 6.5 MeV
- 15 For a nuclear reactor in which the fission rate is constant, which one of the following statements is correct?
- A** There is a critical mass of fuel in the reactor.
B For every fission event, there is, on average, one further fission event.
C A single neutron is released in every fission event.
D No neutrons escape from the reactor.
