# **Mark Scheme**

The specimen assessment materials are provided to give centres a reasonable idea of the general shape and character of the planned question papers and mark schemes in advance of the first operational exams.

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: [www.aqa.org.uk](http://www.aqa.org.uk)

Question 1		
(a)	<i>kinetic energy is not conserved</i> ✓ (or velocity of approach equals velocity of separation)	<b>1</b>
(b) (i)	(use of $p = mv$ gives) $p = 4.5 \times 10^{-2} \times 60$ ✓ $= 2.7 \text{ kgms}^{-1}$ ✓	<b>4</b>
(ii)	(use of $F = \frac{\Delta(mv)}{\Delta t}$ gives) $F = \frac{2.7}{15 \times 10^{-3}}$ ✓ $= 180 \text{ N}$ ✓	
	[or $a = \frac{v-u}{t} = \frac{60}{15 \times 10^{-3}} = 400 \text{ (ms}^{-1}\text{)}$ ] ✓ $F = ma = 4.5 \times 10^{-2} \times 4000 = 180 \text{ N}$ ✓

Question 2		
(a) (i)	$mg = ke$ ✓ $k = \left( \frac{0.25 \times 9.81}{40 \times 10^{-3}} \right) = 61(.3) \text{ N m}^{-1}$ ✓	<b>4</b>
(ii)	$T = \left( = 2\pi \sqrt{\frac{m}{k}} \right) = 2\pi \sqrt{\frac{0.69}{61.3}}$ ✓ (= 0.667 s)

(b)	The marking scheme for this part of the question includes an overall assessment for the Quality of Written Communication (QWC). There are no discrete marks for the assessment of QWC but the candidates' QWC in this answer will be one of the criteria used to assign a level and award the marks for this part of the question.
